

## Grounding Caption

This localization caption provides multi-dimensional spatial analysis of anatomical structures and pathological findings for this panoramic dental X-ray image, including:

Teeth visibility with center points (total: 31):

# Medical Report

## Teeth-Specific Observations

### 1. General Condition

A total of 31 teeth are visualized within the panoramic field. All detected third molars (#38, #48, #28) are present and not impacted. No evidence of missing or supernumerary teeth is observed.

### 2. Pathological Findings

- Suspicious for **calculus** on #12, noted as a radiopaque deposit on the root surface.
- **Caries** observed as a radiolucent lesion near tooth #16, with low confidence in localization (score < 0.80).

### 3. Historical Interventions

No restorations, crowns, root canal treatments, or implants are identified.

---

## Clinical Summary & Recommendations

### Priority Concerns

- **Suspicious calculus on #12** requires professional scaling and polishing.
- **Area of concern near #16** (suspicious for caries) warrants further evaluation with intraoral imaging or clinical examination to confirm.

### Preventive Measures

- Reinforce patient education on plaque control and interdental cleaning techniques.
- Monitor suspicious areas for progression during routine recall visits.

### Follow-up Protocol

- Schedule a 6-month recall to reassess calculus on #12 and evaluate the lesion near #16.
- If caries is confirmed, refer for restorative treatment.
- Consider targeted imaging (e.g., periapical radiograph) for the #16 region to clarify the lesion's extent.
