## Medical Report

### Teeth-Specific Observations

#### 1. General Condition

A total of 28 teeth are visualized, including all permanent teeth. Bilateral wisdom teeth (#18 and #28) are present and unimpacted. No missing teeth are observed.

#### 2. Pathological Findings

- **#25:** Suspicious for periapical radiolucency.
- **#22:** Suspicious for calculus.
- **Near #47:** Clear indication of impacted tooth.
- **Near #37:** Clear indication of impacted tooth.
- **Near #13:** Suspicious for calculus.
- **Near #25:** Suspicious for caries.

#### 3. Historical Interventions

No prior dental treatments (restorations, crowns, root canal therapy, or implants) are identified.

---

### Clinical Summary & Recommendations

#### 1. Priority Concerns

- Impacted tooth near #47 and #37 requiring surgical evaluation.
- Periapatital radiolucency and suspected caries near #25 necessitating further diagnostic assessment.
- Calculus deposits on #22 and near #13.

#### 2. Preventive Measures

- Reinforce plaque control and calculus removal for #22 and near #13.
- Emphasize caries prevention strategies for areas near #25.
- Schedule regular hygiene appointments to manage calculus risk.

#### 3. Follow-up Protocol

- **Referral to oral surgeon** for evaluation of impacted teeth near #47 and #37.
- **Referral to endodontist** for further assessment of periapical radiolucency on #25.
- **6-month recall** to monitor suspicious caries near #25 and calculus deposits.
- **Dental hygiene recall in 3 months** to address localized calculus and plaque accumulation.
