Medical Report

Teeth-Specific Observations

1. General Condition

A total of 28 teeth are visualized using FDI numbering. All permanent teeth are present, including the mandibular left first molar (#18), which is unimpacted and fully erupted. No evidence of missing or supernumerary teeth is noted. The dentition demonstrates adequate alignment and normal eruptive patterns.

2. Pathological Findings

- #15: Suspicious for periapical radiolucency (score: 0.29).
- #22: Areas of concern noted for calculus (score: 0.4).
- #25: Suspicious for caries (score: 0.27).
- Near #26: Suspicious for caries (score: 0.58).
- Near #15: Suggests caries involvement (score: 0.43).

3. Historical Interventions

- #25: Rc-treated tooth with coronal restoration (score: 0.73).
 - Near #26: Rc-treated tooth with crown placement (score: 0.9).
 - Near #26: Presence of a crown (score: 0.81).
 - Near #25: Presence of a crown (score: 0.75).
 - Near #17: Restoration with composite or amalgam (score: 0.69).
-

Clinical Summary & Recommendations

Priority Concerns

1. Deep caries suspicious on #25 and near #26 require urgent evaluation for restorative intervention.
2. Periapical radiolucency adjacent to #15 indicates potential endodontic pathology; further diagnostic assessment (e.g., CBCT) is warranted.
3. Calculus deposits on #22 necessitate professional scaling and polishing.

Preventive Measures

- Reinforce plaque control through biofilm disruption techniques (e.g., interdental brushes, antimicrobial rinses).
- Monitor suspicious caries near #15 and #26 for progression during 3-month recall visits.
- Educate on dietary modifications to reduce cariogenic exposure.

Follow-up Protocol

- Schedule 6-month recall for radiographic and clinical reassessment of caries lesions.
- Refer to endodontist for evaluation of #15 periapical radiolucency.
- Address calculus on #22 with prophylaxis and re-evaluate at 3-month interval.
- Consider restorative planning for #25 and #26 within 2 weeks to prevent secondary caries or fracture.
